## 8x table - tips

### The 8 times table

$1 \times 8 = 8$   
 $2 \times 8 = 16$   
 $3 \times 8 = 24$   
 $4 \times 8 = 32$   
 $5 \times 8 = 40$   
 $6 \times 8 = 48$   
 $7 \times 8 = 56$   
 $8 \times 8 = 64$   
 $9 \times 8 = 72$   
 $10 \times 8 = 80$

### Have a look at these timesavers!

- The numbers in the 8 times table are always even. That means they can be divided by 2 without remainder. If it's ODD then it is not in the 8 times table!

- Have a look at the 8 times table again. The unit digits have a regular pattern - they **go down in 2s**.

$1 \times 8 =$	<b>8</b>	←	8
$2 \times 8 =$	<b>16</b>		6
$3 \times 8 =$	<b>24</b>		4
$4 \times 8 =$	<b>32</b>		2
$5 \times 8 =$	<b>40</b>		0
$6 \times 8 =$	<b>48</b>	←	8
$7 \times 8 =$	<b>56</b>		6
$8 \times 8 =$	<b>64</b>		4
$9 \times 8 =$	<b>72</b>		2
$10 \times 8 =$	<b>80</b>		0

- Try **reversing the sum** if you are having problems.  $8 \times 4$  is the same as  $4 \times 8$ : **32**.

- You can make rectangular patterns on a piece of paper to help you. Have a look at this one - 3 rows of 8 which is the same as the sum  $3 \times 8$ .

Count them up - there are 24. It is **the same as 8 x 3** - 8 rows of 3.
